

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 21-1-2026	Date of previous meeting:
Work undertaken since last meeting: • Reviewed Chapter 5 (Implementation) of the project document. • Defined the three-tier architecture: Frontend (HTML/CSS/JS), API Layer (FastAPI), AI Models Layer (CAMELBERT, Xception, FAISS). • Identified hardware requirements (Intel Core i5, 8GB RAM, GPU for training) and software tools (Google Colab, Hugging Face, Firebase, GitHub).	
Issues you would like to discuss in this meeting: • Confirm that the proposed multi-service architecture is feasible for our student project scope. • Clarify how to handle cold-start latency on Hugging Face Spaces. • Decide on the development environment for collaboration (Google Colab vs local GPU).	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	
Work student should undertake between now and next meeting:	
SECTION -3	
Date of next meeting: 29-1-2026	

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 29-1-2026	Date of previous meeting: 21-1-2026
Work undertaken since last meeting: • Created GitHub repository and initial FastAPI project. • Merged two Arabic fake news datasets (arabic_fake_news + arastance) into ~40,000 balanced samples (80/10/10 split). • Merged Celeb-DF(v2) and FaceForensics++ for deepfake detection (70/15/15 split). • Standardised labels (real=1, fake=0) for both tasks.	
Issues you would like to discuss in this meeting: • Data imbalance: Celeb-DF has more fake than real videos. Should we subsample or use class weights? • FaceForensics++ preprocessing is already done – can we rely on it as is? • How to handle the large size of Celeb-DF (millions of frames) with Colab's free tier?	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	
Work student should undertake between now and next meeting:	
SECTION -3	
Date of next meeting: 5-2-2026	

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 5-2-2026	Date of previous meeting: 29-1-2026
Work undertaken since last meeting: • Curated 50 Arabic sources into knowledge_base_yageen_v3.json (12 categories: official agencies, government bodies, etc.). • Assigned credibility labels (True/Partial/False) and scores (0.0–1.0). • Preprocessed keywords using the same Arabic normalisation pipeline. • Used SentenceTransformer (paraphrase-multilingual-MiniLM-L12-v2) to generate embeddings and built FAISS index (faiss-index.bin).	
Issues you would like to discuss in this meeting: • The trusted-source shortcut logic: should we bypass the model for all official sources, or only those with credibility_score ≥ 0.9? • How to handle death claims or negative markers (e.g., "assassinated") – we plan to force full pipeline for those. • FAISS similarity threshold (0.6) – is that appropriate?	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	
Work student should undertake between now and next meeting:	

SECTION -3	
Date of next meeting: 12-2-2026	
Signatures: 	Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 12-2-2026	Date of previous meeting: 5-2-2026
Work undertaken since last meeting: • Fine-tuned Xception on combined deepfake dataset (Celeb-DF + FF++). Achieved 98% accuracy on validation set. • Fine-tuned CAMELBERT-mix on Arabic fake news dataset. Achieved 85% accuracy, AUC-ROC 94.21%. • Implemented confidence score fusion: $\text{FinalScore} = (\text{ModelConf} \times 0.6) + (\text{SourceCred} \times 100 \times 0.4)$ with dynamic weighting based on similarity. • Integrated all models into FastAPI endpoints: /predict (text) and /predict-media (image/video).	
Issues you would like to discuss in this meeting: • Xception training took a long time; we observed overfitting after epoch 3. We used early stopping – is that sufficient? • The fusion formula gives 60% weight to model, 40% to source. Should we adjust based on similarity (high similarity → trust source more)? • Video processing: we sample 1 frame per second and take median – any better method?	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	
Work student should undertake between now and next meeting:	

SECTION -3	
Date of next meeting: 19-2-2026	
Signatures: 	Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 19-2-2026	Date of previous meeting: 12-2-2026
Work undertaken since last meeting: - Completed model training and saved checkpoints (best_xception.pth, fine-tuned CAMeLBERT). - Addressed challenges: Large data size → extracted 1 FPS instead of all frames. Colab instability → used checkpointing and Google Drive mounting. GPU memory → limited fake news training to 20k samples per class. Overfitting → used load_best_model_at_end=True. API key exposure → moved Tavily keys to environment variables. - Implemented trusted domain override for death claims and negative markers.	
Issues you would like to discuss in this meeting: - The trusted domain override works but we are still seeing some false negatives for non-facial manipulations (e.g., full-body composites). Any suggestions? - Keyword matching improved but still misses some variants (e.g., "المملكه" vs "الملك"). - We need guidance on how to document these challenges in the final report.	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	

Work student should undertake between now and next meeting:

SECTION -3

Date of next meeting: 26-2-2026

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 26-2-2026	Date of previous meeting: 19-2-2026
Work undertaken since last meeting: • Designed testing strategy: functional, model accuracy, performance, compatibility. • Created test cases for deepfake detection (TC-DF-01 to TC-DF-05) and news verification (NV-TC-01 to NV-TC-03). • Collected additional test media (real & fake images/videos) beyond the training datasets. • Prepared test environment: Chrome, Firefox, Safari on desktop and mobile.	
Issues you would like to discuss in this meeting: • How many test samples are sufficient for reliable evaluation? We have ~500 deepfake frames and 200 Arabic news texts. • Should we include adversarial examples (e.g., images with compression artifacts)? • The "unsupported file type" test (.gif) passes, but should we also test very large files (>50MB)?	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	
Work student should undertake between now and next meeting:	
SECTION -3	
Date of next meeting: 5-3-2026	

Signatures:

A handwritten signature in black ink, appearing to be 'Layan', written over a horizontal line.

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 5-3-2026	Date of previous meeting: 26-2-2026
Work undertaken since last meeting: • Computed accuracy, precision, recall, F1-score, and AUC-ROC for both models. • Deepfake: Accuracy 98%, Precision (Fake 99%, Real 96%), AUC-ROC 99.74%. • News: Accuracy 85.04%, Precision/Recall/F1 all 85%, AUC-ROC 94.21%. • Generated confusion matrices and ROC curves using sklearn.metrics.	
Issues you would like to discuss in this meeting: ○ The deepfake model has higher precision for FAKE (99%) than REAL (96%) – that's acceptable for security, but should we mention it as a bias? ○ News verification accuracy is lower (85%) – is this still considered good for Arabic NLP? Literature suggests yes. ○ How to present AUC-ROC in the report – should we include the full curve figure?	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	

Work student should undertake between now and next meeting:

SECTION -3

Date of next meeting: 2-4-2026

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 2-4-2026	Date of previous meeting: 5-3-2026
Work undertaken since last meeting: • Measured response times: cold start 30–60 seconds, text analysis <5 sec (warm), image analysis 3–8 sec. • Tested all functional requirements (FR-01 to FR-11) – all passed. • Collected user feedback via built-in rating system: average 4.5 stars (4 ratings), one comment "easy to use, clear results". • Verified non-functional requirements: usability (RTL, Cairo font), security (two-layer admin auth), scalability (Firebase auto-scales).	
Issues you would like to discuss in this meeting: • Cold start is a known issue on Hugging Face free tier. Should we implement a keep-alive ping from frontend every 5 minutes? • The admin dashboard works but the two-layer auth (password + Firebase) might be overkill. Keep it? • One report flagged a false negative for a full-body composite – we already documented this limitation.	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	

Work student should undertake between now and next meeting:

SECTION -3

Date of next meeting: 9-4-2026

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 9-4-2026	Date of previous meeting: 2-4-2026
Work undertaken since last meeting: • Generated Grad-CAM heatmaps for real images (diffuse activation) and deepfakes (focused on nose/cheeks/mouth). • Analysed error cases: 128 false positives (real→fake), 65 false negatives (fake→real). • Identified three failure categories: low-quality media, non-facial manipulations, unseen manipulation styles. • For news verification: observed that vague/unverifiable text returns FAKE with low confidence (76%) – acceptable.	
Issues you would like to discuss in this meeting: • The false negatives (65) are more critical than false positives (128). Should we adjust the decision threshold to reduce FN? • Grad-CAM for real images shows diffuse heat – is that actually meaningful or just noise? • Some low-resolution deepfakes are missed – do we mention this as a known limitation?	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	

Work student should undertake between now and next meeting:

SECTION -3

Date of next meeting: 16-4-2026

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 16-4-2026	Date of previous meeting: 9-4-2026
Work undertaken since last meeting: • Compared Yaqeen with ClaimBuster, Full Fact, Microsoft Video Authenticator, Sensity AI. • Yaqeen is the only unified platform (text+media) with Arabic support and open access. • Deepfake accuracy 98% vs Microsoft (undisclosed) and Sensity (paid enterprise). • Documented limitations: poor generalisation across deepfake types, limited video temporal analysis, no exact source URL.	
Issues you would like to discuss in this meeting: • The comparison table shows Yaqeen as superior in many aspects, but is it fair given that others are production systems? • Microsoft Video Authenticator is discontinued – should we replace it with another tool (e.g., Deepware)? • Limitation "no exact source URL" – can we improve this by storing article URLs in the knowledge base?	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	

Work student should undertake between now and next meeting:

SECTION -3

Date of next meeting: 23-4-2026

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 23-4-2026	Date of previous meeting: 16-4-2026
Work undertaken since last meeting: • Documented novel features: unified platform, Arabic focus, FAISS knowledge base, confidence score fusion. • Improvements over existing systems: integration, free access, evidence-based verdicts, additional features (TTS, sharing, reporting). • Verified that no existing system offers all these together. • Prepared a table of improvements (Section 8.2).	
Issues you would like to discuss in this meeting: • Should we file a provisional patent or just publish the report? (Supervisor advice needed.) • The confidence score fusion is novel – should we release the code as open source? • How to quantify "improvement" beyond feature comparison? (e.g., user satisfaction 4.5 stars vs unknown for others)	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	

Work student should undertake between now and next meeting:

SECTION -3

Date of next meeting: 30-4-2026

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 30-4-2026	Date of previous meeting: 23-4-2026
Work undertaken since last meeting: - Identified target users: general public, journalists, students, content creators, media organisations. - Described real-world applications: social media monitoring, newsroom fact-checking, educational programmes, government communication. - Wrote "Lessons Learned" covering: scarcity of Arabic datasets, normalisation challenges, face detection failures, model deployment, precision-recall trade-offs.	
Issues you would like to discuss in this meeting: - The "Lessons Learned" section is quite long – should we move some points to an appendix? - One lesson: "balancing precision and recall in high-stakes contexts" – is that adequately addressed by our bypass logic? - Any other lessons we missed? (e.g., importance of UI/UX for non-technical users)	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	

Work student should undertake between now and next meeting:

SECTION -3

Date of next meeting: 7-5-2026

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 7-5-2026	Date of previous meeting: 30-4-2026
Work undertaken since last meeting: • Compiled final project outcomes: trained models, knowledge base, integrated web platform, user features. • Mapped each original objective (from Chapter 1) to achieved results. • Confirmed that all objectives were fully met: Arabic fake news detection, deepfake detection, knowledge base, unified platform, transparent verdicts, accessibility. • Prepared a table summarising objective vs achievement.	
Issues you would like to discuss in this meeting: • Objective "provide transparent, evidence-backed verdicts" – is the confidence score + source references enough? Should we also show the FAISS similarity score? • The deepfake detection objective only mentions "detect manipulation" – we achieved that, but temporal analysis is missing (future work). • Any objective that was partially met? (We think all are fully met.)	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	

Work student should undertake between now and next meeting:

SECTION -3

Date of next meeting: 14-5-2026

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi

UQU (CS) Regular Supervision Record Form

Before each weekly project meeting with supervisor, the students will fill this form and will submit it to GP coordinator after the meeting. Copies will be submitted in the Course's file at GP Coordinator office.

SECTION -1 (to be completed by the STUDENT prior to meeting)	
Students' Names: Layan Khalid Al-Hazmi Lana Eidha Alsalmi Alluluwah Salem Alqthamy Haya Naif Alnefaie	Supervisor Name: Dr.Huda Alhazmi
Date: 14-5-2026	Date of previous meeting: 7-5-2026
Work undertaken since last meeting: • Defined future extensions: video deepfake detection (3D-CNN / Transformers), multi-language support (English, French, Urdu), browser extension, mobile app. • Described current deployment (Hugging Face Spaces + Firebase) and scalability plans (cloud migration, model quantisation, knowledge base expansion, continuous improvement loop). • Estimated resources needed for production deployment (GPU instance, CDN, database scaling). • Updated the Gantt chart to include these future items (not for grading).	
Issues you would like to discuss in this meeting: • Are these future work items realistic for a follow-up project (e.g., Master's thesis)? • The scalability plan mentions "model quantisation" – should we try INT8 or just mention as a possibility? • The current deployment on Hugging Face free tier is not sustainable for real users – any recommendation for a low-cost production option?	
SECTION -2 (to be completed by the SUPERVISOR at the meeting)	

Work student should undertake between now and next meeting:

SECTION -3

Date of next meeting:

Signatures:

Student (Team Leader): Layan Khalid Al-Hazmi
